Substance

Reynolds Metals Company manufactures residential and commercial aluminum siding. They roll, form and extrude aluminum and have painting and coating activities. The facility is located in an industrial area northwest of Ashville.

The facility filed a RCRA Notification August 18, 1980 and submitted the Part A application November 19, 1980. The Ohio Hazardous Waste Facility Approval Board issued Reynolds Metals an Ohio Hazardous Waste Interim Status Permit November 25, 1981.

Reynolds Metals' Ohio Hazardous Waste Permit is inaccurate. The permit allows hazardous waste storage in containers, treatment and storage in surface impoundments. The facility submitted a Permit Modification to show storage in containers on August 4th, 1982. The treatment process and surface impoundments meet the RCRA definition of wastewater treatment unit. 40 CFR 260.10 exempts wastewater treatment units from RCRA regulations. The wastewater treatment plant (unit) is regulated under the Clean Water Act. Reynolds Metals is in compliance with their NPDES Permit. Presently, the NPDES Permit is being renewed.

Reynolds Metals is a protective filer. They submitted a 103(c) Notification June 22, 1981. U.S. EPA called in their Part B application and it is due October 26th, 1984.

A telephone conversation April 4th, 1984 with a facility representative indicated that Reynolds Metals does not dispose hazardous waste onsite.

Conditions at the site indicate that no FIT or State cleanup action is necessary. Reynolds Metals does not pose apparent hazards to the environment or population.
